

AE-Preamplifier Data Sheet

AEP3N

The AEP3N is an Acoustic Emission preamplifier with inputs for differential or single ended sensors. Its gain can be set by Acquisition software or adjusted manually by dip switches if used stand-alone (i.e. without an AMSY-5/6 system). In case of very energetic AE-signals a 34dB attenuator can be manually activated by an internal switch.

Frequency pass band configuration can be individually configured by using available high-pass and low-pass modules.
